

**CALFED Water Quality Program  
Parameters of Concern  
Recommendations by the Parameter Assessment Team**

On January 28, 1998, the Parameter Assessment Team made the following recommendations regarding parameters of concern:

- Refine the term “nutrients” to include “total phosphorus, soluble reactive phosphorus, nitrate, nitrite, ammonia and organic nitrogen.”
- Ammonia, as a toxicant, should be expressed as “un-ionized ammonia” and targets for un-ionized ammonia should be reflected in the table of water quality targets.

**CALFED Water Quality Program  
Potential Parameters of Concern  
Recommendations by the Parameter Assessment Team**

On December 3, 1997, and January 28, 1998, the Parameter Assessment Team made the following recommendations for addition to a list of "potential parameters of concern":

- Chromium VI
- MTBE
